(May have a crank handle).

Safety Product Options for above windows.

Window Stops Window Guards	Window Stops Window Guards	Window Stops Window Guards	Window Guards	Window Guards

✔ **Consider which windows pose a risk and choose safety solutions for each:**
- First floor windows: Open windows that have a soft surface under them (shrubs or bark dust) to decrease the impact of a fall. Install Window Stops.

- Second story and above windows: Consider using a combination of products. (Install Window Stops on windows you open 4 inches and install Guards on windows you will open more than 4 inches.)

✔ **Do not depend on window screens to keep a child from falling out:**
(Screens are designed to easily push out for emergency escape.)
